NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

I was on an IFR flight plan from KIGX and after being cleared for the visual approach cancelled IFR approximately 10 miles northwest of GAI. I executed a visual approach with left downwind and base to runway 32, approximately 2 mile final. ASOS was calling wind 100 off centerline and moderate (as I recall, 310 at 7-10kt). I extended my downwind slightly to allow for a long enough final to gauge the crosswind component on final but noted no significant component. I crossed the numbers at 81kts, touched down normally on mains with stall warning sounding. There was no component of loss of control.

On touchdown, aircraft immediately began drifting towards left side, and I was unable to stop drift with application of right rudder. As aircraft continued to drift towards edge of runway, I elected to initiate a go-around and applied power. Cognizant of risk of torque roll at low speeds with the aircraft, I did not apply full power. Aircraft became airborne and gained about 10-15 feet of altitude, but I noted the left wing was approximately 20 degrees down, and I unable to raise it even with full right aileron controls. Aircraft descended in left turn, and when it was apparent that ground impact was imminent, I retarded throttle and braced.

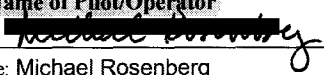

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

ADDITIONAL INFORMATION *(Please type or print in ink)*

Use this space if additional space is needed for any answers.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
